Milling and Grain

[illegible]

The screenshot shows the Miller website's 'Future of Milling' section. The header includes the Miller logo and the URL 'www.futureofmilling.com'. The navigation bar lists 'Home', 'About', 'Contact', 'Products', 'Services', 'Support', and 'Training'. The main content area is titled 'Future of Milling' and features a 'Bohler' section. This section includes a 'Bohler' logo, a 'New' tag, and a grid of images showing various milling machines and components. A sidebar on the right contains a 'Contact Us' form with fields for 'Name', 'Email', and 'Phone', and a 'Submit' button. Below the form is a 'Bohler' logo and a 'New' tag. The footer contains a 'Bohler' logo and a 'New' tag.

The screenshot shows the Bohler website's contact page. The header includes the Bohler logo and navigation links. The main content area features a contact form with fields for Name, E-Mail, and Telefon, and a 'Kontakt aufnehmen' button. A sidebar on the right contains a 'Kontakt-Informationen' section with a phone number and a 'Kontakt-Formular' section with a 'Kontakt aufnehmen' button. The footer contains a 'Kontakt-Formular' section with a 'Kontakt aufnehmen' button.

The screenshot shows the Milling website. At the top, there are logos for 'milling', 'RANDEK', and 'BOHLER'. Below the logos is a navigation bar with 'Home', 'About Us', 'Products', 'Services', 'Contact Us', and 'FAQ'. The main content area features a large image of a mill and the text 'Milling' in a large, stylized font. Below this, there is a section titled 'Supporting Partners' which includes logos for 'milling', 'RANDEK', and 'BOHLER'. To the right of the logos is a world map with orange location markers. Below the map is a section titled 'Supporting Partners' with logos for 'milling', 'RANDEK', and 'BOHLER'. At the bottom, there is a section titled 'Supporting Partners' with logos for 'milling', 'RANDEK', and 'BOHLER'.

Good grinding starts with the feeding: Feeding systems for hammer mills

by Tieggen Verfahrenstechnik, Germany

Hammer mills are among the most common mill types for many applications in the grinding of grain or other stoniness raw materials; for example, in the production of animal feed or in the food industry.

Good grinding depends, on the one hand, on the technical design of the hammer mill itself (sieve surface, impact surface, rotorisation, speed and sieve penetration) and on the other hand, on the operation of the mill (air volume flow, air velocity, blow type, blow surface).

FEEDING SYSTEMS for hammer mills

Good grinding starts with the feeding

In addition, the feeding of the hammer mill also plays an important role. The grinding plant can only be operated efficiently with optimum feeding and the appropriate dosing of the input material.

Tasks of the feeding system

The feeding system for a hammer mill essentially has four important tasks to fulfil:

1. Distribution of the feed material: The distributed feed of the product over the entire width of the hammer mill has a significant influence on the grinding process, because only in this way can the sieving impact and screen surface of a hammer mill be fully utilised. In addition, wear is reduced because the screen and screen are worn more evenly. An even distribution also leads to an energy-efficient use of the mill's drive power.
2. Adaptation to product properties: Particularly in product mixtures (e.g. in the post-grinding of animal feed), products that are heavier and easier to grind (e.g. barley and corn) may be present as individual agents in the process. The feeding system has the task of adjusting the throughput capacity of the mill to the product present in the mixture, so that the mill is always operated at its optimum operating point. For this purpose, the load of the mill motor is monitored and the conveying capacity of the feeding device is controlled on the basis of the motor current (load-dependent dosing).
3. Separation of impurities: Due to harvesting, handling, storage, etc. the raw material may contain impurities such as metal parts or stones, which can lead to considerable damage if they get into the mill (e.g. sieve breakage). Control of foreign matters with the rapidly rotating components of the mill can also lead to sparking and, associated with this, to a risk of fire and explosion. The feeding equipment therefore has the task of reliably separating foreign parts in front of the mill.

CONTENT MARKETING

“Content marketing is a strategic marketing approach focused on creating and distributing valuable, relevant and consistent content to attract and retain a clearly defined audience — and, ultimately, to drive profitable customer action.”

Content marketing is as old as the first engraved stones, through to the first published newspapers and magazines. Your current and future customers will be drawn to all **relevant** content. Some will read it in printed material, others will search for it online, some will receive it in newsletters and others will pick it up in social media.

The key to it being read is not in its delivery but in its relevancy. It will only be **valuable** content if it is **relevant**. And if you are serious about marketing your content, you have to be **consistent** and available to all your current and potential customers in their own **languages**. Making your content easily accessible to readers ensures it is viewed as **valuable** content, whether it is distributed via **print**, **digital** as **news** or via **social media**.

What is content

- Press releases
- Features (400-1500 words plus images)
- Product focusses
- Videos
- Infographics
- Staff appointments
- Completed project feature
- Company news updates
- Case studies
- Images relating to a topic
- Research
- Company anniversaries

EXPO

Milling and Grain is committed to supporting the industry by attending trade shows and exhibitions throughout the year.

CONFERENCES & AWARDS

The Online Milling School is a set of weekly e-learning experiences for industry members wanting to learn more about each individual stage of the feed milling process. Each webinar specialises in one specific process in the feed production chain and features industry experts providing insight into how to optimise this process.

Co-organised by Milling and Grain and Progressus Agrischools, the Online Milling School runs on a weekly basis and features a wide variety of topics, ranging from batching, mixing, conveying, pelleting and more.

Find out more at myMAG.info/e/875

Build myFeedmill is a concept introduced by Milling and Grain and VIV Worldwide in 2017 under the CropTech-FeedTech brand. During the Build myFeedmill Conference, 10-12 companies are given the opportunity to deliver a 10-minute presentation about a specific solution that assists feed millers in their everyday processes and practices.

Build myFeedmill enables attendees to discover how the latest innovations may help make their feed milling truly innovative, efficient and profitable.

Find out more at myMAG.info/e/297

Regularly hosted at VIV Exhibitions, the Aqua Feed Extrusion Conference series is a brilliant opportunity for companies to present their latest innovations for the feed and extrusion industries. Co-organised with Dr Mian Riaz, Head of Extrusion Technology at Texas A&M University, USA, these conferences specialise in pet food, aqua feed and all aspects of extrusion technology.

Find out more at myMAG.info/e/296

Milling and Grain are proud to host the GRAPAS Innovations Conference at leading trade show VICTAM International. This annual conference focusses upon unique innovations in the flour, rice and pasta processing industries and features companies showcasing their new solutions for the milling sector, as well as keynote speakers from international milling organisations. Solutions are presented to specialist milling judges, who decide who is worthy of taking home the coveted GRAPAS Innovations Awards trophy.

Find out more at myMAG.info/e/291

The GRAPAS Innovations Awards are Milling and Grain's opportunity to give recognition to key innovators in the flour, rice and pasta processing sector. Companies are given the chance to enter their new milling solutions into the awards, to be judged on which innovations bring the most exciting benefits, features and abilities to the industry. Entries into the GRAPAS Innovations Awards are invited to present their innovations at the GRAPAS Innovations Conference.

Find out more at myMAG.info/e/291

Also hosted at VICTAM International exhibitions, The Animal Feed and Nutrition Awards give companies the chance to have their new feed processing solutions recognised for their exciting offerings to the industry. Companies are welcome to enter their solutions into the awards, to be judged by an international panel of expert judges and trophies are awarded at the VICTAM International Reception. Previous award winners include Famsun, Geelen Counterflow and Van Aarsen.

INTERVIEWS

To recite, to declaim, to chant out

Rongorongo Live

Studio at St James

The Rongorongo Live Lounge

Milling and Grain have established a new video studio to complement our MAG TV Channel, to allow for interactive discussion around topics that matter to millers, nutritionists, farmers and the milling industry most.

Rongorongo Live invites leaders and experts, to discuss matters that concern them and that need to be addressed. It's an opportunity for our food production industries to join the debate about food safety, food security, the impact of trade and regulation on food supply and many other factors that production processes now face in an ever-concentrated world.

In our first few months of production, we have been proud to host industry leaders such as the European Aquaculture Society, Extru-Tech, Progressus Agrischools, VICTAM International and VNU Exhibitions in the Rongorongo Live Lounge.

Stay tuned to the Rongorongo Live video lounge to stay updated with all the crucial information regarding the aquaculture industry, as well as industry interviews, project announcements and more.

Access the full Rongorongo Live video library at:

TRAINING

www.onlinemillingschool.com

The Online Milling School

The Online Milling School

In June 2020, Milling and Grain magazine, in cooperation with Progressus Agrischools, set up the Online Milling School. Serving as a platform for millers to engage with the industry and latest innovations in the sector, we have hosted a total of 12 e-learning experiences, discussing various critical aspects of the feed milling operation. These sessions have been a great success, and this is only the beginning!

Who should attend the OMS?

Are you a professional operating a feed mill plant, a nutritionist or in a technical role that supports feed mill operations? Then come and join us at the Credo Online Milling School for a series of live webinars that will improve your knowledge and confidence in your work.

Credo brings you the most up-to-date, essential knowledge and enhanced understanding of livestock, aquaculture and petfood milling operations directly to your desktop!

Essentially, Credo offers a virtual live-streaming environment that is dedicated to providing you with a unique online learning experience, one that meets your constant drive to learn and grow within your chosen career.

The carefully crafted training modules of Credo are delivered by a variety of industry experts that are ready to share their valuable knowledge and know-how for the overall betterment of the industry and its professionals.

The benefit? Gain the skills you need to accelerate your career in the field of feed milling, or simple, an excellent way for you to learn more about a topic that you find beneficial for your everyday professional activities. No prior experience or travelling is required to get started. Simply sign up and you are ready to start building those critical capabilities.

Be a future presenter

Interested to show our industry that you are a supporter of people development through education? You are more than welcome to be part of this initiative! We are always on the lookout for expert instructors, knowledgeable contributors and programme supporters.

Be seen by those who want to learn

Our OMS will provide a 12-week learning experience in all aspects of feed milling, from raw material handling through to final packaging and dispatch. Those attending will be interested in all the technology and equipment that goes into the production process and there is no better way to reach these future industry movers and shakers than through sponsorship. Sponsoring comes in a range of packages and is a unique opportunity either as a one-off or over an extended period to be associated with this learning platform.
